QUALITY LIGHTING FOR THE BATHROOM

GOOD LIGHT INCREASES YOUR QUALITY OF LIFE

LET GOOD BATHROOM LIGHTING

SET THE MOOD

The correct lighting for putting on make-up, shaving or drying your hair – but also lighting which is warm and inviting makes you feel content. Light is so important to our well-being. Imagine yourself getting up early and preparing for the day in bathroom lighting which emits a glaring, blinding and cold glow. Not the best way to start your day right? Then remember how important it is to consider the lighting when designing your bathroom.

We have collected a series of tips for good bathroom lighting which provides good working light, sets the right mood and adds sparkle to the humdrum of everyday life.

DID YOU KNOW THAT:

A 60-year old person needs twice as much light as a 20-year old?

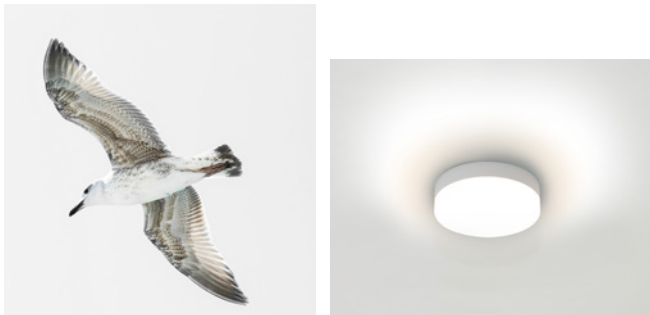

APPROVED FOR BATHROOM USE

The lighting you install in your bathroom must be designed for bathroom use. Regulations differentiate between different zones and light fittings in zone 2 require an IP44 certification. Zone 2 is the area from the outer edge of the shower enclosure and the bath or 120 cm from the shower head. All Dansani light fittings and integrated lighting have IP44 certification for use as bathroom lighting, which gives you the reassurance you need.

CONSIDER THE TASK LIGHTING

The light from your bathroom mirror should reveal the details you prefer to detect before others do it. In other words, you should be able to do your make-up or shave under bathroom lighting which is as natural as possible while allowing you to see yourself as you would in good daylight. We recommend that you choose a mirror or a mirror cabinet with integrated lighting or lights fitted overhead. There are plenty of options available for bathroom mirrors with lighting, for example our popular round and oval Moon mirror or the square Show mirror with lighting all the way round.

CREATE CONSISTENT BATHROOM LIGHTING

Most people want a bathroom with a calm, beautiful feeling and one way of achieving this is by designing your bathroom lighting to form one consistent solution. You might want to choose our Jupiter light which comes as a ceiling light, a pendant and mirror light. With these 3 matching lights in your bathroom you not only obtain great illumination, you also produce a clean, simple look.

Now it is possible to combine mirrors, ceiling lights and pendant lights in a group, so they can be controlled together with a single touch. Adjusting the mirror lighting will also adjust the colour and intensity of the ceiling lights and pendant lights. This unique wireless control is simple to set up and doesn't require a Wi-Fi connection – you just need to purchase one receiver to connect up to 5 devices - either pendants or ceiling lights.

CONTROLLING THE LIGHTING.

On your way to bed, you prefer warm, dimmed bathroom lighting like the warm, red light of the sunset. In the morning, however, you need good task lighting which is whiter and closer to natural morning light. You can have both by choosing mirrors and mirror cabinets with adjustable lighting. This light ranges from warm red to cool white and of course with the option to dim both if this is what you want. And as mentioned you can connect the mirror or mirror cabinet light to your ceiling lights and pendants, so all light is controlled together with a single touch on the control panel.

NIGHT-TIME DIMMING & A COSY ATMOSPHERE

Just enough light to allow you find the toilet and the basin but not enough to wake you up. That's how it's supposed to be at night and this is exactly how the delicate, discrete downlight incl. motion sensor works. Together with the rest of the bathroom lighting the downlight produces a pleasant effect even when it's not night-time. The downlight incl. motion sensor is an option for all vanity units and an underlight can also be added to many mirror cabinets in the Calidris, YOU and Luna ranges.

DID YOU KNOW THAT:

It is a scientific fact that light plays an important role for our well-being?

GET AN OVERVIEW WITH BATHROOM LIGHT FITTINGS

When you open the drawer, the light turns on and you can easily spot the tweezers, nail file and all the other grooming accessories in your bathroom. Plus the design of Dansani's drawer lighting of course ensures the correct angling of the light with the effect that the LED light rail is out of view. Drawer light is an option in all Dansani ranges.

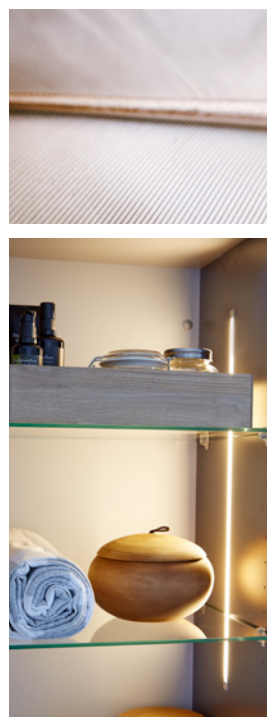

DID YOU KNOW THAT:

We are indoors 80% of the time where we are dependent on artificial lighting?

THINK SUSTAINABILITY

Dansani's LED solutions are of high quality and boast 20 years of useful life with 4 hours of daily use and minimum energy requirements. And when the light fitting eventually shines its light for the last time, the product easily dismantles for environmentally friendly and sustainable waste sorting. The full range of our bathroom lighting and light fittings are of the same high quality while at the same time being as gentle on the environment as possible.

DON'T FORGET CABINET LIGHTING

Just as it's satisfying to have a complete overview of all the bits and pieces in your drawers, it is equally beneficial to be able to see the contents of your mirror cabinet, tall cabinet or wall cabinet in the bathroom. Pleasant, functional lighting which thanks to its vertical positioning provides a good view of multiple shelves without blinding you when the cabinet opens because of its discrete installation in the side of the cabinet.

BECOME A LIGHTING EXPERT

IF YOU WANT TO IMPRESS YOUR FRIENDS WITH YOUR KNOWLEDGE OF QUALITY LIGHTING, YOU NEED TO KNOW THESE TERMS

KELVIN

Kelvin is a unit of measurement for the colour temperature of the light and the number of Kelvin degrees defines the colour of the light. Sunlight has a Kelvin of approximately 6,500 and a candle has approximately 2,700 Kelvin.

Ra VALUE

The Ra value expresses the ability of the light to reproduce colours in a natural and accurate way. This is important when you put on your makeup, shave or need to distinguish between dark blue and black clothes. The higher the Ra value, the higher the level of colour reproduction. Daylight has a Ra value of 100.

SORTING

An LED light fitting consists of many small LED diodes that are sorted according to colour temperature and colour reproduction coefficient in order to emit the best and most uniform light.

IP44

At Dansani your safety is our priority. All the electrical components in our furniture are pre-fitted to guarantee safe installation. At the same time, we wish to give you an opportunity to maximise the use of the space in your bathroom. Accordingly we have a wide range of IP44-approved products so you can install your furniture as close as possible to the water source while retaining all the storage space you need.

ZONE 2: A limited area covering a radius of 60 cm from the outside of the bath or shower tray to 2.25 m vertically above floor level. A minimum of IP44 classification is required in this area and no 230V sockets are permitted. Dansani has a range of IP44-approved mirrors that can be placed in zone 2 while IP44-approved mirror cabinets and vanity units with sockets can be placed in zone 2 if the actual socket is placed outside the zone.
